Ibrahim Cisse

Offensive Security Researcher | Reverse Engineering | OSINT & Threat Intelligence

norm41@proton.me | linkedin.com/in/n0rm41 | github.com/0xn0rm41 | 0xn0rm41.github.io | EU-based, open to relocation

Profile

Self-directed offensive security researcher focused on binary exploitation, reverse engineering, malware analysis and OSINT/CTI. Solved 200+ CTF challenges and builds and publishes his own security tooling.

Experience

Independent Security Researcher & OSINT Lead 2023 – Present

n0rm41 | Offensive Security & Cyber Threat Intelligence *Remote*

- **Case Manager, UK OSINT Conference 2026.** Worked as part of an international team of case managers through Newrali, using its OSINT framework to manage a live, time-sensitive missing-person investigation under strict OPSEC. Contributed to the selection and prioritisation of potential missing-person cases and managed incoming crowdsourced information, triaging and cross-validating hundreds of leads using SOCMINT, GEOINT and company registry research.
- **CTF competitor.** Solved 200+ challenges across binary exploitation, reverse engineering, web, cryptography, OSINT and forensics (OliCyber and international CTFs); 15+ competitions; qualified for the **z0d1ak CTF 2026 Finals**.
- **Exploit development & RE.** Wrote proof-of-concept exploits for stack corruption, format-string and ROP challenges with pwntools; analysed Windows and Linux binaries and malware (IDA Pro, GDB + pwndbg, PE/WinAPI).
- **Research output.** Authored 13 technical write-ups and 7 intelligence reports (timelines, source validation, confidence assessments); conducted GEOINT investigations using satellite imagery, ADS-B/AIS data and image forensics.

Selected Projects – Not Yet Publicly Available on GitHub

iKnowItAll — OSINT correlation framework 2024 – Present

Python, C++, ctypes

- Entity resolution and correlation across multiple data sources, plus case-management and reporting workflows.
- Modular Python architecture with a C++ shared library (ctypes) for performance-critical parts.

Crawly — web intelligence crawler 2024 – Present

Python

- Extracts emails, phone numbers, social links and tech fingerprints; robots.txt-compliant with depth limiting.

N0rm41 Browser — privacy-oriented research browser 2023 – Present

Python *Prototype*

- Tor-based routing, encrypted search and volatile sessions that minimise local forensic artefacts.

Technical Skills

Languages	Python, C, C++, x86/x64 Assembly
Exploitation & RE	Foundational knowledge and hands-on experience in binary exploitation, ROP, format string vulnerabilities, pwntools, IDA Pro, GDB + pwndbg, Windows PE analysis, static/dynamic malware analysis, and basic custom loader/injector development in isolated, controlled environments.
OSINT & CTI	GEOINT, SOCMINT, source validation, intel reporting
Signals & Radio	SDR (RTL-SDR, HackRF, USRP, Airspy), METEOR-M LRPT via SatDump, ADS-B/AIS
Tools & Platforms	Linux (Fedora, Kali, Arch and more distros), Windows, Nmap, Wireshark, Burp Suite, Metasploit, QEMU/KVM, FlareVM, Git

Education

Italian Secondary Education

Diploma di Maturità — Scientific/Technical Track *Italy*

Community & Languages

- Member of the **UK OSINT Community**; CTFtime handle **0xn0rm41**. Presented *"Malware Development Fundamentals"* at school (2025).
- **Languages:** Italian (native), English (Upper-intermediate, B2(CEFR)).
